

Abstract

Mobile Telecommunications Device.

A method of controlling a mobile telecommunications device (1) is disclosed. The
5 device (1) includes a memory (18) for storing a list of contacts each having an e-mail
address associated therewith and a keypad (4) including a short-cut key (13), the
method comprises the steps of accessing the list of contacts stored in the memory
(18); selecting a contact from said list; accessing a screen for composing an e-mail
10 message having a recipient address field by activating the short-cut key (13), wherein
activation of said key (13) also enters the e-mail address of said selected contact in
the recipient address field; composing an e-mail message; and activating the short
cut key to send said message to the address entered in the recipient address field.
